

The Fire Department recommended that we have a source of water on the west side of the Township. Since the water level in Twin Lake has gone down the dry hydrant at the causeway has become unusable. In order to accommodate this request the Township has contracted to have built a high capacity well and storage building at the back of the Township parking lot.

This well will be available to any area fire department and has the capacity to pump water at the rate of 300 gallons per minute into tanker trucks. Even with all the lakes around getting

water to fight fires can be difficult, this new well should help. ANR Gas Storage Co (TransCanada) has given Blue Lake Township a \$10,000 Grant to help pay for this well.

The back parking lot at the township hall was paved to improve the use of the water well. When first tested it became very evident that a paved lot was need because of the high volume of water and mud that quickly accumulated. The paving was paid for by using Township Improvement funds ..
